

Focused residue mapping at two specificity-related aligned sites

Specificity-related site 1 (alignment column 68)

067940_AQUAE	Val67
2Q60 (chlorinase-related)	Thr70
1RQP (fluorinase)	Thr75
Original paper discussed this as a Tyr/Thr-related position.	

Specificity-related site 2 (alignment column 151)

067940_AQUAE	Gly127
2Q60 (chlorinase-related)	Gly131
1RQP (fluorinase)	Ser158
Original paper discussed this as a Gly/Ser-related position.	

067940 shares Thr-like alignment at site 1 less clearly (Val67 vs Thr70/Thr75), but matches the chlorinase-related reference at site 2 (Gly127 ↔ Gly131) rather than the fluorinase Ser158.
