

Focused residue mapping at two specificity-related aligned sites

Site 1 — alignment column 68

Tyr/Thr-related position discussed in the original paper

Protein	Residue
O67940_AQUAE	Val67
2Q6O (chlorinase-related)	Thr70
1RQP (fluorinase)	Thr75

Site 2 — alignment column 151

Gly/Ser-related position discussed in the original paper

Protein	Residue
O67940_AQUAE	Gly127
2Q6O (chlorinase-related)	Gly131
1RQP (fluorinase)	Ser158

Main signal: O67940 matches the chlorinase-related Gly pattern at site 2 (Gly127 ↔ Gly131), rather than the fluorinase Ser158. Site 1 is less direct because O67940 has Val67.
